**ORALITE®**

Your garment's reflective material should stand out from the work environment.

## Choose the right material for the right job.

### Prismatic ~ Wet conditions

This material reflects back color and utilizes thousands of micro prisms that are covered by a transparent film. Due to this protective layer, it performs exceptionally well in wet conditions and resists abrasion compared to glass bead.

### Glass Bead ~ Warm conditions

Silver glass bead material is made of microscopic glass beads adhered to fabric, which creates a more flexible and lightweight reflective option. While ideal in many environments, especially warm ones, its largest drawback is that it loses reflectivity when wet and can abrade in rough environments.

“PROTECTING MYSELF  
MEANS PROTECTING  
MY FAMILY.”
